=====

Please verify correctness of peak meter and maximum peak meter programmatically. In "ITU-R BS.1770" mode, make sure that recorded levels either equal the right channel's level for a moment (first part of the file) or shortly drop below the left channel's level (last part of the file).

Given levels describe the left channel. The left channel is delayed by one second, while the right channel's level has been attenuated by 1.93 dB.
